YOUSEF GHANEM

Computer Engineer | Software, Systems & Test Engineering · ISTQB Certified
+972-52-5686464 | Yousef-gh@live.com | Jerusalem, Israel
linkedin.com/in/yousefyghanem | github.com/YousefYGhanem

PROFILE

Computer Engineer (B.Sc., Birzeit University) and ISTQB Certified Tester (CTFL v4.0) with experience across network and server infrastructure, multi-threaded software development and structured software quality engineering. Built and secured production server and networking environments, developed real-time AI systems for a distributed international team, and has delivered full test cycles for web, API and banking applications. Builds and tests his own products too: a Unity mobile game heading to Google Play and a bilingual e-commerce web app. Fluent in Arabic, Hebrew and English.

TECHNICAL SKILLS

Quality & Test Engineering: Test strategy and planning, test design techniques, test documentation (PRD, STP, STD, STR), functional, regression, API, exploratory, security and performance testing, defect lifecycle management; ISTQB Certified Tester, Foundation Level (CTFL v4.0)

Testing Tools: Qase, Jira, Postman (collections, environments, assertions, runner), JMeter, Swagger, Wireshark, Docker, Git, ClickUp

Programming: Java, Python, JavaScript, C, C#, PHP, Bash, SQL

Software Engineering: OOP, data structures & algorithms, multi-threading & concurrency, MVC architecture, REST & SOAP APIs, Supabase, Three.js

Systems & Networking: Windows Server 2022, Active Directory & domain controllers, Linux, routing & switching, firewalls, VoIP, DNS/mail hosting, web filtering, Cisco Packet Tracer

Databases: MySQL, SQLite, HyperSQL, PostgreSQL (Supabase), SQL query design and data validation

Hardware & Embedded: Verilog, VHDL, Assembly (8086, MIPS), RISC pipelined processor design, IoT, digital signal processing, integrated circuit design, real-time and embedded systems

AI, 3D & XR: Machine learning, deep learning, image processing; Unity 3D (games, VR/AR), Unreal Engine, Blender, Cinema 4D, SolidWorks, 3D printing

PROFESSIONAL EXPERIENCE

Technical Support & IT Specialist — 099 Primo — Nov 2024 – Mar 2025 · Jerusalem

- Administered company server infrastructure, including deploying an alternate mail server that removed a single point of failure in company communications.
- Designed and hardened a Windows Server 2022 domain controller, defining Active Directory structure, group policy and access control for internal users.
- Configured and managed routers, switches and firewalls across customer and internal networks, alongside web filtering, VoIP and domain/mail hosting services.
- Diagnosed connectivity faults across ADSL, VDSL, GPON, Metro Ethernet and SIM router services, isolating root cause across the physical, link and network layers.
- Managed escalations between customers and upstream providers by phone and email, shortening resolution time on multi-party faults.

AI Research & Development Engineer — Visual Arena — Apr 2024 – Sep 2024 · Sweden (Remote)

- Developed AI-driven non-playable characters for a digital twin city simulation, driving agent behaviour from real-time data streams.
- Designed and optimised multi-threaded decision-making algorithms, improving responsiveness and stability under concurrent real-time load.
- Collaborated remotely with a distributed Swedish engineering team across time zones, delivering against iterative research milestones.

Technological Mentor — Karev Program — Sep 2023 – Dec 2023 · Jerusalem

- Taught programming, 3D design, 3D printing and robotics across multiple Jerusalem schools, and introduced VR applications for teachers and students.

Full Stack Intern — IVAS Communications — Jan 2021 – Jun 2021 · Palestine

- Built and enhanced web application features with Bootstrap and jQuery within MVC frameworks.

QA PROJECTS

End-to-End Testing — Banking Application (ParaBank) — Final course project — 2026

- Tested a Docker-hosted online banking system (REST and SOAP APIs, HyperSQL database) across the full STLC with a testing partner; led functional testing and documentation.
- Reverse-engineered a PRD covering nine modules and wrote the Test Strategy, including scope, entry/exit criteria and six risks with mitigations.
- Designed 44 test cases across 8 parent suites and 21 sub-suites in Qase, executed over two runs; exploratory testing exposed two security gaps (no password policy, no login lockout).
- Built a Postman collection covering six REST endpoints; ran JMeter baseline, load, stress and transactional scenarios up to 100 concurrent users; documented 11 unique defects.

End-to-End Testing — E-Commerce Web Application — Course project 2026

- Team project: 49 test cases across 5 feature suites in Qase over two parallel runs. Ran the functional cycle, built a 21-request Postman collection with chained requests and assertions, logged 14 defects in Jira and closed with a no-go release recommendation.

QA Lifecycle — Messaging Platform (Direct Messages) — Course project 2025

- Executed 35 test cases across 10 suites over two runs, then audited results for integrity, catching duplicate entries and false passes, before migrating defects into Jira.

SIDE PROJECTS

Relic Rush — Mobile Endless-Runner Game — Solo project 2026

- 3D endless-runner for Android with power-ups, challenges and tilt controls; prototyped the gameplay in Three.js, then built it in Unity.
- Ran my own QA on gameplay, controls and performance on a Pixel 8, and prepared the Google Play release (store listing, 13+ audience, opt-in analytics). Release in progress.

Men Barra (من برا) — Bilingual Dropshipping Web App — menbarra.com 2026

- Arabic/English e-commerce app selling AliExpress products in Jerusalem, the West Bank and Arab towns in Israel, built on Supabase with the official AliExpress Dropshipping API.
- Self-tested the Arabic/English and right-to-left layouts, the checkout flow and WhatsApp/SMS/email order notifications. Pre-launch.

Parametric Hardware Modelling & 3D Printing — Personal project 2025 – 2026

- Reverse-engineered a load-bearing wall bracket in Blender from physical measurements, then printed it and iterated on tolerances until it fit the original fitting.

EDUCATION & CERTIFICATIONS

B.Sc. Computer Engineering — Birzeit University 2017 – 2022

- Coursework: Operating Systems, Computer Networks (CCNA curriculum), Software Engineering, Embedded Systems, Cybersecurity, AI & Machine Learning, Data Structures & Algorithms.

ISTQB Certified Tester — Foundation Level (CTFL v4.0) — ITCB (Israeli Testing Certification Board) Oct 2026

Quality Assurance Course — Certificate of Completion — Newtech Academy Mar 2026 – Sep 2026

- Test design, STLC and test documentation; SQL, operating systems and networking; API testing with Postman; performance testing with JMeter.

Software Testing Course (40 hrs) — Sigma Software University, Ukraine Dec 2023 – Apr 2024

Robotics & Automation Systems Program (360 hrs) — Moona Sep 2023

VR/AR Development (240 hrs) — InterTech with Gaza Sky Geeks Sep 2022

2D & 3D Animation (200 hrs, grade: Excellent) — Lutheran World Federation & JACCI 2021 – 2022

LANGUAGES & OTHER

Arabic (native) · English (full professional) · Hebrew (professional working) · Valid driving licence
